

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Course: CSE489

Section: 01

Name: Shahed Parves Kallol

ID: 23101263

Email: shahid.parves.kallol@g.bracu.ac.bd

Project Title: Debate Tab Soft — a debate tournament tabulation and management app for British and Asian Parliamentary formats

Project Features:

By the end of this course, implemented features:

- a) Tournament and round setup (format, rounds, sides)
- b) Simplified draw generation (power-pairing heuristics)
- c) Format-specific ballot entry (2-team / 4-team layout)
- d) Adjudicator allocation with conflict checking
- e) Standings calculation
- f) Motion release per round
- g) Public draw and results view

Online Resources used:

a) Reference:

- *Tabbycat (open-source debate tabulation software) — GitHub repository, used as a conceptual reference for the tournament domain model*
- *CalicoTab.com — hosted Tabbycat deployment, referenced for admin workflow*
- *Flutter official documentation (flutter.dev)*

b) GitHub: *github.com/TabbycatDebate/tabbycat — conceptual reference only; no code or schema reused.*

Future Enhancements:

Following enhancement can be added to the current system which will improve the system.

- a) Adjudicator feedback collection and reporting
- b) Multi-tenant hosting for multiple tournaments by keyword
- c) Automated break category and bracket computation
- d) Full BP/AP conflict-type coverage (institution and adjudicator-adjudicator conflicts)
